Browser Management Suite

Ion

Ct

Java version management and security

Secure and manage multi-browser environment

browsium

Key Scenarios Driving Ion Usage

IE Migration
- Remediate legacy web apps for target browser
- Control settings for modern applications

Java Management
- Run multiple versions of Java in IE, side-by-side
- Use most current/secure version as default

Security
- Lock down security settings for Internet browsing
- Relaxed configuration for LOB applications

What's New in Ion 3.7

Goals:

– Make project development and testing easier and faster

– Streamline deployment in large, complex environments

Key new features:

– Find in Project

– Project History

– Change Rendering Mode

– User Agent String management

– Project Update Activation
