Introducing Browsium Proton

Matt Heller – Founder

Kirk Quinn – Client Engagement Manager

browsium

About Browsium

- Founded in 2010 by browser experts from Microsoft
- Built company to respond to key learnings:
  - Browser is the new OS – modern platform for enterprise applications
  - Web applications highly dependent on browser versions
  - Compatibility and security are a zero sum game
  - Enterprises lack required browser management platform

Our mission is to enable enterprise organizations to cost-effectively manage and secure web browsers and web applications at global scale.

browsium

Web Apps Are Inherently Complicated
More complicated than native applications

- An unstructured collection of resources

- Mix of system, security, and browser

- Run time compilation

- Containerized within a container

Evolution to browser-based application environments requires purpose-built tools to identify and manage interdependencies

Web App Management Challenges

- Typical enterprise has hundreds of web applications
- IT lacks complete picture of usage and owners
- New SaaS applications deployed constantly
- Dependency tracking is impossible
  - What application works with which browser version?
  - Java version management – security vs. compatibility
  - Do users have configuration needed for critical applications?

browsium

Key Scenarios Driving Solution Need

Migration	• Browser version migration, new browser adoption • Web application migration to new version
Maintenance & Optimization	• Prioritize regression testing for OS, browser & Java patches • Software license optimization and audit response
Security	• Track Java and ActiveX inventory and usage • Identify risks before they become a problem
Employee Productivity	• Identify time spent on non-productive Internet activity • Correct hotspots before they affect the bottom line
IT Transformation	• New web-based systems with critical client requirements • New device rollouts to access existing web applications

Introducing Browsium Proton

Browsium Proton is an easy to use web application inventory and analytics solution for enterprise IT

| Rich, valuable data	Easy and instant access	Enterprise-ready
Proactively mitigate risks and make better-informed business decisions	Up and running quickly, delivering results you can use immediately	Scales and fits seamlessly into large organization IT operations

Proton Solution Architecture

Proton Client

Client PC
Client PC
⋮
Client PC

PCs throughout enterprise

→ Automatic →

Browsing activity & inventory

← Configuration (data push interval, "ignore" rules) ←

→ data push →

Proton Server

Proton Service (web service)

Proton Database

On-premises or hosted

Proton Manager

Proton Manager (web app)

Hosted by Browsium

→ Reports & analytics →

← Settings & rules ←

Any modern browser

- o Proton Client is easily deployed, invisible to end users, zero impact
- o Proton Server built for scale, can be hosted, on-premises, or hybrid
- o Admins access Proton Manager from any modern web browser
- o Proton data stored in MS SQL Server – export for deeper analytics
